

## **Mobility In The High Tatra Mountain Region - Summary by Peter Chudy -**

The High Tatra in Carpathians massif is one of Europe´s most ecologically sensitive living area. We present also the following aspects of actual statement, the development in future with some propositions to solve the questions in sustainable socio-economic activities and environmentally compatible mobility and transportation.

- Slovakia – a mountaion country geografical and environmental viewpoint
- High Tatra – the highest part of the Carpathian arch
- High Tatra – the part of Euroregion Tatry – the transfrontal cooperation with the Poland (INTERREG, our exemples: ALPS MOBILITY)
- Transport and mobility as the principal factor of the development of tourism in the mountain area – actual situation
- Accessibility to the Hig Tatra: axis country – region – locality
- Classification of the manners of the transportation: hard and soft mobility
- Accessibility for all groups of visitors (hiking, cykling, trains, buses, horse-drawn carriages, etc., high-performance sportsmen, family recreation and seniors, handicaped visitors,.....)
- Analysis of the actual conditions and the propositions of solutions – the planning of economic and social development of the Hogh Tatra: three pillars – economic, environtmental and social

In conclusion, it can be stated that the successes of our activities and of the transnational collaboration will be the result of the some projects promoting sustainable mobility.
